## Postgres Fast Track setup Requirements.

Omnis Studio is called in programming talk, the GUI (Graphical User Interface) this provides the screens to interface with your Fast Track Estimating System that gets the data from the PostgreSQL data base.

PostgreSQL is the main component where the data is stored on server hard drive in some location. There are instructions on how to install and set up the complete system in this manual

There are other components required to make complete Fast Track Estimating System. There are the following:-

omnis.exe

This file contains the Omnis GUI. See in this manual instructions on how to install.

SQLFastTrackW
eb102.lbs

This file is the application containing the information on how Fast Track looks and operates. This file sometimes needs be updated to keep the user with the modifications.

FastTrackSQLTa
ble.txt

This is little text file that contains 10 lines of text with <> angles. The angles contain text that tells the Fast Track system where the server is located and what conditions that are to be meet.
This file must be place adjacent to the Omnis.exe file

comp-logo.jpg

This file is a nonessential file and is just for show. This jpeg file can changed to icon of your choice.
This file must be place adjacent to the Omnis.exe file
