

Category 6

6.13 Profiles and Passwords

This screen provides the permission to use of the system for new users and setting permission of each section of system for existing users. It also provides the modification for the Screen Resolution to individual user so that users can set the screen resolution to fit on their own monitors.

6.13.1 Profiles and Passwords

Windows window titled "Password and Profile" with a search icon and a question mark icon.

User Name	Password	Profile ID	Level	Email	Phone No	Expiry Date	First Name	Last Name
Sunshine	32086347	501	0			1 JUL 2011	Sunmi	Kim

Comment:

User Name	Password	Profile ID	Level	Email	Phone No	Expiry Date	Time Logon	Time Logoff	Computer Na...	Domain	IP Address	Computer ...	Project
Master	123456	500	0				3 JAN 2011 15:1...		ATAD5		192.168.1...	Master	PROJ110
Sunshine	32086347	501	0			1 JUL 2011	30 DEC 2010 18:...		SPRINGWELL		192.168.1...	Sunshine	PROJ110

Buttons: Settings, Set User Permission's to Windows, New, Edit, OK, Cancel, Close

This screen helps users to set their profiles such as Password, Expired date and shows their status such as Profile ID, E-mail, and Project number they working on. It also helps user to give new users permission to log on to their project as set up new username.

6.13.2 Settings

By clicking this button, the user can modify their screen resolution like shown below.

You can select one of those numbers of horizontal and vertical resolution or you can set your own resolution rate by click "Edit" button and typed numbers into blank column.

6.13.2 Set User Permission

By clicking this button, the user can modify the permission of each section and each button of the system to particular user.

The screen shows 4 tables which are Class window & Remote form Data Base List, Object Status List, Class Window & Remote form List and Object Available list.

Firstly, select own of section that you want to modify (you can modify sections starts name with P at Class Internal Description) from Class Window & Remote form List than you can see the list that you can modify in the Object Available List.

Second, drag the line you choose from the Class Window & Remote form List to Class Window & Remote form Data Base List.

Third, click the line you just moved then the list you can actually modify will shows.

Lastly, select the component that you want to modify and change permission by clicking "Yes" or "No" button on top right hand side.

The screenshot shows the 'User Details and Profiles' application window for 'Sunshine' with 'Data File: PROJ110'. It contains two main sections:

Class Window & Remoteform Data Base List

pushbutton	Help		1075	
pushbutton	Print		1106	
popmenu	MGlobal	MGlobal	1109	
pushbutton	Drum No:-	Drum No:-	1125	

 This button deletes the selected window profile to all buttons being visible.

How to use in a practical sense.

Most administrators of the system will only allow access to certain windows, this can be controlled from the main Navigation screen (WNavigation). This means the buttons on the navigation screen will not appear therefore no access to the window.

Another more defined example is the cable schedule window. You may want the user to access the window for report generation and information reviewing. However administrator wants to restrict the access to making any Editing, New or Deleting records. This means you would hide the Edit New and Delete buttons.
